

Septic Rescue

Restore Failing Septic Systems in Just 3 Days

Septic Rescue is a revolutionary treatment that restores failing septic systems back to optimal working condition. It can save you thousands of dollars by averting an imminent mechanical pump-out of your septic tank or (even worse) the replacement of your entire septic system.

Septic Rescue is the only effective treatment for septic systems that have reached crisis point. It is NOT a mere preventative product like other septic system treatments available. Septic Rescue guarantees to restore your septic system into working condition within 3 days or you get your money back.

Septic Rescue is powered by BiOWiSH™, a revolutionary live enzyme technology that utilizes a proprietary high-speed enzyme cluster to rapidly digest organic waste and eliminate odor causing compounds up to 1,000x times faster than other products.

Septic Rescue produces high-speed BiOWiSH™ enzymes that do not rely on sludge or biomass to digest waste. In fact, it almost completely eliminates sludge, so in most cases you will never need to perform mechanical pump-outs of your system.

Other live bacteria or enzyme based products rely on building large colonies of bacteria to digest waste - this process takes time, produces foul odors in the short-term and builds up sludge in your septic system.

Benefits of Use

- Easy, 3 step treatment
- Rapidly eliminates foul odors resulting from septic system failure
- Aggressively degrades sludge build-up inside septic tank
- Breaks down thick layers of fat, oil and grease (scum)
- Does not rely on maintaining large volumes of bacteria in the septic system to digest waste
- 100% Money Back Guarantee
- 100% natural and non-toxic
- Up to 3 months residual action
- Cost effective treatment for homes with up to 4 toilets

Uses

- Domestic septic systems
- Aerated wastewater systems

Packaging

- Set of 3 x 3.5oz NET packets in box

When should you use Septic Rescue?

Use Septic Rescue when you experience any of the following problems which are symptomatic of a failing septic system:

- Toilet, drain, sink, shower or bath runs slowly or backs up when flushing or draining
- Foul odor is emitted within the house, above the septic tank or drainfield, or escapes from the vent pipe
- There is pooling water, muddy soil or sewage above the drainfield or in the basement

How does Septic Rescue work?

Septic Rescue is an easy, convenient three-step treatment kit that will restore your septic system back to health and ensure that it continues to operate at an optimal level.

Step	Packet	What it does	What to expect
1	RESTORE	Powerful BiOWiSH™ enzymes rapidly eliminate odors and break down sludge buildup and fat layers, restoring your septic system to working condition in only 3 days.	After using the first treatment packet (RESTORE), you can expect any foul odors or smells to disappear within 2 days. Within 3 days, your toilet, drain, shower and sink will start to run faster and not backup after flushing or draining.
2	BOOST	Added after 7 days as a booster, it ensures that any stubborn sludge or fat layers are completely digested.	After using the second treatment packet (BOOST), you can expect more water transferring from the septic tank to the drainfield. You may also experience pooling water above the drainfield again, however there should be no more foul odor or smells. This is perfectly normal as the remaining sludge and fat layers in the tank are completely digested and water flows more freely to the drainfield.
3	MAINTAIN	Added after 14 days as a maintenance dose. To ensure the ongoing health and maintenance of your septic system, repeat this step every 3 months by using BiOWiSH Technologies Septic Tank Aid, available separately at your nearest retailer.	After using the third treatment packet (MAINTAIN), you can expect your septic system to be operating at optimum conditions, just like it was brand new.

Instructions for Use

To ensure you get the most benefit out of using Septic Rescue, it is important that you follow the usage instructions carefully.

1. Use each packet in the following order:
 - Day 1 – RESTORE
 - Day 7 – BOOST
 - Day 14 – MAINTAIN
2. Make sure toilet bowl is flushed properly before dosing. Do not use any disinfectant cleaners on your toilet bowl prior to dosing.
3. Open packet.
4. Pour contents into toilet bowl. For homes with multiple toilets, divide contents evenly between toilets.
5. Leave and do not use toilet bowl for 30 minutes to activate the BiOWiSH™ enzymes.
6. Flush toilet bowl to introduce the BiOWiSH™ enzymes into the septic system.
7. For best results, do not use your toilets or run hot showers within 4 hours of flushing the contents of each packet. The ideal time to use Septic Rescue is at night time just before going to bed. The 4-hour interval will allow the BiOWiSH™ enzymes to perform the high-speed enzymatic transformation process of waste under the most optimum conditions.
8. If you miss a treatment date that is okay. Simply apply the next step as quickly as possible and continue to completion. If you miss a follow up treatment by more than 14 days we recommend you purchase a new pack and start the treatment process from the beginning.
9. To ensure the ongoing maintenance of your septic system and prevent costly pump-outs, use BiOWiSH Technologies Septic Tank Aid every 3 months. Register for our free reminder service by visiting www.biowishtechnologies.com/reminder and we will send you a friendly reminder when it is time to apply Septic Tank Aid. For more information on Septic Tank Aid, visit www.biowishtechnologies.com/sta

For more detailed information on Septic Rescue and septic systems in general, please refer to the product information booklet inside each Septic Rescue box.

Ongoing Maintenance

After using Septic Rescue, apply Septic Tank Aid every 3 months to remove accumulated sludge inside your septic tank and prevent costly pump-outs.
