

Septic Tank Aid

Boost the performance of your Septic Tank

With **Septic Tank Aid** you are using BiOWiSH™, the most powerful live enzyme technology available to rapidly digest waste matter in your septic system. Solids are hydrolyzed by the powerful enzymes and the contaminants are then converted into their final elements. These are off-gassed as nitrogen, oxygen, carbon dioxide and water vapor. In the process, your septic system is rapidly deodorized and will operate with a substantially higher efficiency level.

Most septic tank additives require weekly or monthly dosing and cannot break down solids, however, by opting to use the new **Septic Tank Aid**, it is quite simple to restore proper functioning of septic tank systems.

Septic Tank Aid is powerful enough to restore performance in most systems that have stalled or are struggling under heavy loading. However, the best approach is to treat your system every 3 months to ensure that fat deposits and sludge do not build up in your tanks and leachfield. Over time, the leachfield will be cleared of built up deposits that restrict proper drainage. If you have persistent problems, it may be necessary to pump your system to remove accumulated waste. You can then commence using **Septic Tank Aid** and your system will remain in balance.

Septic Tank Aid is the easiest and most cost effective regular maintenance you can perform for your septic tank system, providing years of hassle free service. You are also ensuring minimal impact on the environment when choosing **Septic Tank Aid**.

Septic Tank Aid is ideal for:

- General preventative maintenance
- Odor removal
- Booster for heavy loads
- Booster after long periods of inactivity

Septic Tank Aid utilizes the same technology used in commercial sewerage treatment plants.

Benefits of Use

- Suitable for all septic systems
- Breaks down fat layers to boost septic system performance
- Rapidly removes rather than masks odors
- Digests solids reducing cost of pump-outs
- Ground water pollution is significantly reduced
- Fast acting, easy application
- Economic quarterly treatment
- 100% natural and non-toxic

Uses

- Domestic wastewater systems
- Aerated wastewater systems
- Greywater diverter systems
- Composting toilets

Packaging

- 3.5oz NET packet in a box

Instructions for Use

1. Open packet.
2. Disperse powder into toilet bowl after last flush for the day and leave in toilet to activate and clean and deodorize toilet bowl and pipes. For properties with more than 1 toilet divide sachet evenly between all toilet bowls.
3. Product will be charged into septic system with the next flush.
4. Repeat treatment in 3 months.
5. Register for your free reminder email at www.biowishtechnologies.com/reminder

Importance of Septic System Maintenance

Homeowners should be prepared to ensure proper maintenance of their septic tank systems. Poorly maintained septic tank systems are a serious source of water pollution and may cause odor problems, drainage issues and present health and sanitation risks.

Proper functioning septic tanks systems need to operate under certain conditions. Factors which can lead to treatment failure, system blockages and odor problems include:

- Excessive use or selection of the wrong type of cleaning chemicals (disinfectants, bleaches etc) which disrupt the essential bacterial action
- Presence of poisons
- Sludge build-up in the tank
- Excessive fats that cause a surface layer and prevent sufficient oxygen to support bacterial action
- Solids and fat build ups in the leachfield
- Shock volumes of incoming water (e.g from several loads of washing in quick succession or a large number of people at a party, houseguests etc)
- Lack of use of the system while the house has been vacant and loss of bacterial colony

When odors become noticeable and drainage is impaired, this is a serious indication that the septic system is not coping and it is a sign of hygiene and environmental risk.
